

Non-Chronological Report

Title: Reptiles

Introduction:

Reptiles are air-breathing vertebrates. Reptiles can be found on every continent except for Antarctica.

Sub-heading: What are the features of reptiles?

All reptiles have lungs and breathe air. They have scales on their skin and their skin is dry. They are cold blooded and most lay eggs.

Sub-heading: Which animals are reptiles?

Snakes, crocodiles, alligators, turtles, tortoises and lizards are all reptiles.

Fun Fact!

Lizards and snakes smell with their tongues.

Sub-heading: Do all reptiles have legs?

Many reptiles have legs but not all of them. Snakes are legless reptiles and they move along the ground by flexing their bodies.
