## Electrical appliances of the future

---

### Task A: Electricity in our lives

Carry out your own research by talking to adults at school or at home to find out which **electrical appliances** were invented during their lives.

Are there any electrical appliances that they remember growing up without? What did they use before this?

Which appliances do they remember being invented and what difference did it make to their lives?

## Task B: Electricity in the future

Think like an **engineer**.

Invent and design a new **electrical appliance** that will improve life in the future.

Draw a labelled **diagram** of your design.

Include a paragraph about what it is and what it does.
